Wall thickness measurement as part of non-destructive testing is one of the most common uses of ultrasonic technologies. In addition to the classic measurement of wall thickness as part of quality control, our precise wall thickness measurement devices can also be used to detect damage caused by erosion and corrosion on, for example, ships, storage tanks, pipelines and cranes. We have a variety of versions of our devices for all types of applications.

**Detailed Product Information**

**SONOWALL 70**
New A-scan / B-scan thickness gage

**SONOWALL 50**
Integrated data logger for precise wall thickness measurement
SONOWALL 60
for wall thickness measurement of corroded surfaces and surfaces with protective coatings

SONOWALL S
Stationary ultrasonic wall thickness measurement on pipe

SONOSCAN Dual-Element Probes
Probes with two separated elements

SONOSCAN Straigth-Beam Probes
Robust Pulse-Echo Probes

APPLICATION NOTES

Corrosion measurement at refineries

Ultrasonic testing in mining
