

Air Bubble Detection

The SONOCHECK series, originally designed for **medical technology** products, is available in several configurations for different requirements. The interface configuration and the sensitivity can be easily adapted with help of the **advanced, but easy to operate software**, available for configuration and test of the air-in-line sensors. Modifications of the design, evaluation algorithms or fail-safe operation are available as **customer-specific applications**.

The **non-invasive ultrasonic detection of air bubbles** in fluid-filled tubes plays an important role in many fields of science and industry. Ultrasonic air bubble detectors are used in many areas, including medical technologies, the pharmaceutical industry, the foodstuffs industry, automation and process control.

Detailed Product Information

SONOCHECK ABD05

for the reliable detection of air bubbles in medical applications requiring fail-safe operation

SONOCHECK ABD06

for the monitoring of liquids in industrial applications

SONOCHECK ABD07

the miniaturized air bubble sensor with an outstanding price-performance ratio

Product Flyer

Type	Title	Size
	Flyer SONOCHECK	650 KB

Application Notes

Detection of micro air bubbles in reagent liquids

Detection of micro air bubbles in a DNA analysis machine

Ready for 60601 3rd edition with redundant air bubble sensor SONOCHECK ABD08
